

ABSTRACT

A portable video display unit is adapted for use with various electronic video-processing devices, such as video game consoles and video players (DVD players) . The video display unit includes a base member adapted for removably attaching the video display unit to the electronic video processing device. The base member includes a locking device to securely affix the video display to the game console and permit portability while attached. A display screen is pivotally mounted to the base member for pivoting between a stowed position and a deployed position which is viewable by a user of the electronic video processing device.
